

GRILLES FOR EXTRA DETECTOR PROTECTION

XP Grilles

BIC Technology had developed the XP range of protective grilles using specially designed super-fine meshes for improved protection from punctures and accidental damage.

- Significant increase in operational lifetime of probes (reduce mylar/screen and window punctures).
- Same or improved transmission (efficiency)
- Available for most model / types of probes

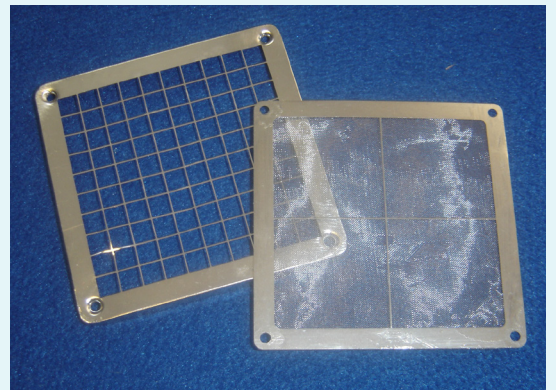

The inner mesh frames can be replaced if damaged. The mesh frames can also be swapped for a higher transmission (efficiency), where ruggedness is not a high priority.

All the components are made from high grade stainless steel.

Ordering :

Please specify model/type and required transmission efficiency - 70% (standard) or 80% and above for beta probes.

Due to the BIC policy of continuous R&D, changes to the specification may occur without notice
