

LCG SPEC

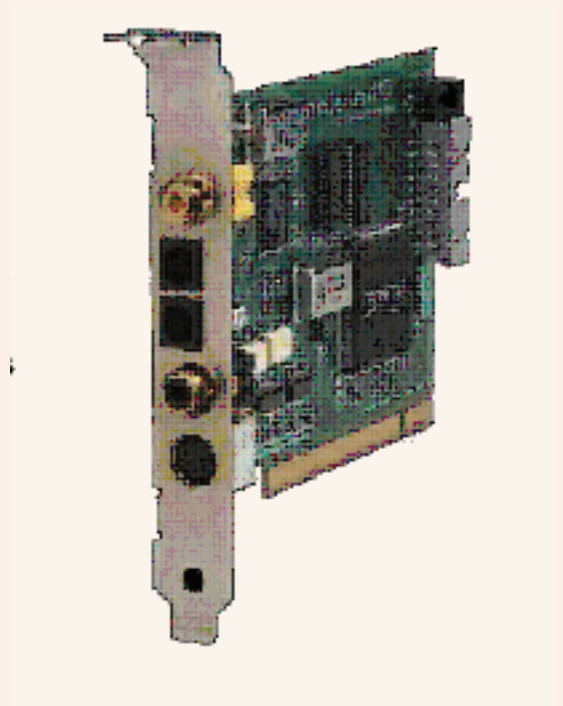

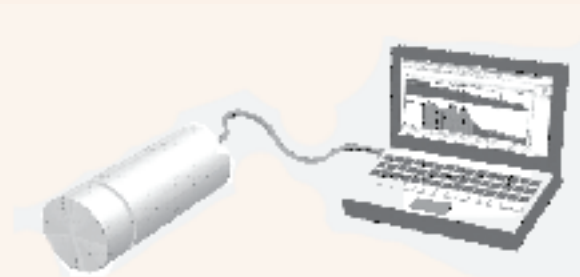

LCG Spec is a simple, affordable, innovative and truly versatile approach to gamma/X-ray spectroscopy. A range of Sodium Iodide and other low resolution detectors (CsI, CdTI) interface to the LCG_Spec*

Portable

The 32-bit mca (multi-channel analyser) comes with full Windows software giving a true live spectral display & a unique signal diagnostic package (a built in oscilloscope function). Automatic calibration and on-line activity calculations occur during acquisition.

Most IBM PCs will work with the low cost PCI card. As well as a full on-line Help, the software has a temperature drift compensation feature.

Additional feature: Single-Channel option to show gross counts over time or alternatively define an energy window. Perfect for demonstrating decay times of short-lived isotopes.

IONIZING RADIATION SOLUTIONS
